## ORDER NO. KM40309199C2

# Service Manual

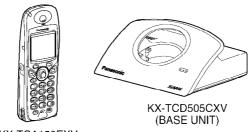

**Telephone Equipment** 

KX-TCD505CXV / KX-TCA150EXV / KX-TCA151EXV

Digital Cordless Phone Violet Version (for Czech) (for Slovakia)

Caller ID and SMS Compatible

#### Configuration for each model

| Model No   | Base Unit | Handset    | Charger Unit |
|------------|-----------|------------|--------------|
| KX-TCD505  | 1         | 1 (TCA150) |              |
| KX-TCA151* |           | 1          | 1            |

<sup>\*</sup> KX-TCA151 is an optional accessory, while a Handset supplied with a Base Unit is KX-TCA150.

## **SPECIFICATIONS**

#### **SPECIFICATION**

Standard: DECT= (Digital Enhanced Cordless Power source: AC Adaptor (220 V - 240 V AC, 50 Hz)

Telecommunications) Power consumption, GAP=(Generic Access Profile)

Standby: Approx. 3.5 W/Maximum: Approx. 9.2 W Number of channels: 120 Duplex Channels Charger Unit: Standby: Approx. 2.3 W/Maximum: Approx. 6.8 W 1.88 GHz to 1.9 GHz

Frequency range: Battery life, Handset Stand-by: Up to 120 hours (Ni-MH) TDMA (Time Division Multiple Access) Duplex procedure: (if batteries are Talk: Up to 10 hours (Ni-MH)

Channel spacing: 1728 kHz fully charged):

1152 kbit/s Bit rate spacing: Operating conditions: 5 - 40 C, 20 - 80 % relative air humidity (dry) Modulation: GFSK= (Gaussian Frequency Dimensions, Base Unit

(D x W x L): Shift Keying) 58 mm x 128 mm x 105 mm RF Transmission Dimensions, Handset approx. 250 mW (D x W x L): 143 mm x 48 mm x 32 mm Dimensions, Charger Unit

ADPCM 32 kbit/s Voice coding: (D x W x L): 84 mm x 86 mm x 60 mm Operation range: Up to 300 m outdoors. about 200 g Up to 50 m indoors Weight, Base Unit:

Analog telephone Weight, Handset: about 125 g Telephone Line about 113 g Weight, Charger Unit: RJ11 Plug Connection jack:

Specifications are subject to change. The illustrations used in this manual may differ slightly from the original device.

IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF. Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark. When this mark does appear please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

## ✓!\ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you note the serial number, write down all 11 digits. The serial number may be found on the bottom of the unit.

# **Panasonic**

## 1. ABOUT LEAD FREE SOLDER (PbF: Pb free)

#### Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

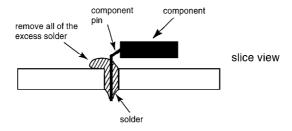

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin (Sn), Silver (Ag), and Copper (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

#### Caution

- PbF solder has a melting point that is 50°F ~70°F (30°C ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700°F ± 20°F (370°C ± 10°C). In case of using high temperature soldering iron, please be careful not to heat too long.

- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F (600°C).
- If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See the figure below).

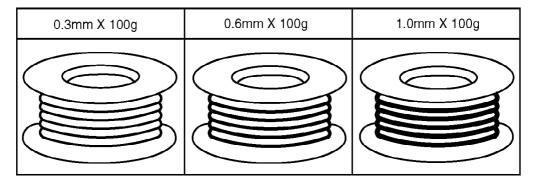

## 1.1. Suggested PbF Solder

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper

(Sn+Ag+Cu), you can also use Tin and Copper (Sn+Cu) or Tin, Zinc, and Bismuth (Sn+Zn+Bi). Please check the manufac

turer's specific instructions for the melting points of their products and any precautions for using their product with other materials.

The following lead free (PbF) solder wire sizes are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

## 1.2. How to recognize that Pb Free solder is used

#### 1.2.1. Base Unit PCB

#### Note:

The location of the "PbF" mark is subject to change without notice.

#### 1.2.2. Handset PCB

(Component View)
(Flow Solder Side View)

#### Note:

The location of the "PbF" mark is subject to change without notice.

## 1.2.3. Charger Unit PCB

#### Note:

The location of the "PbF" mark is subject to change without notice.

## 2. FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

- 1. Cover the plastic parts boxes with aluminum foil.
- 2. Ground the soldering irons.
- 3. Use a conductive mat on the worktable.
- 4. Do not touch IC or LSI pins with bare fingers.

## 3. CAUTION

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommendenced by the manufacturer.

Dispose of used batteries according to the manufacture's Instructions.

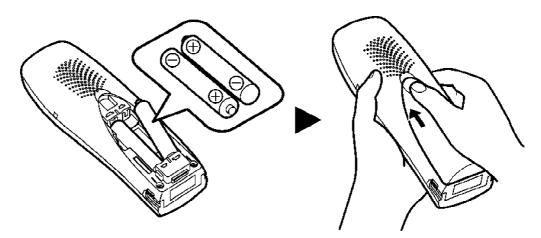

## 4. BATTERY

## 4.1. Battery Installation

Please ensure the batteries are inserted as shown. 

part should be inserted first. Close the cover as indicated by the arrow.

- When you replace the batteries,  $\oplus$  part should be removed first.

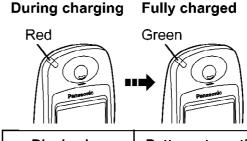

## 4.2. Battery Charge

At the time of shipment, the batteries are not charged. To charge, place the handset on the base unit.

Please charge the batteries for about 7 hours before initial use. During charging, the charge LED will light as shown below.

| Display icon | Battery strength    |
|--------------|---------------------|
| <b>(***</b>  | High                |
| -            | Medium              |
|              | Low                 |
|              | Needs to be charged |

The handset which power is off will be turned on automatically when it is placed on the base unit.

The handset will not operate while it is on the base unit.

If you do not recharge the handset battery for more than 15 minutes, the display will flash

when the handset is lifted off the base unit.

#### Note for Service:

- The battery strength may not be indicated correctly if the battery is disconnected and connected again, even after it is fully charged.
   In that case, by recharging the battery as mentioned above, you will get a correct indication of the battery strength.
- Confirmation of Antenna Pict ( Y) indication:

  If Antenna Pict is indicated, charge time is about 7 hours.

  However, if Antenna Pict is flashing, charge time becomes long.

## 4.3. Battery Information

After your Panasonic battery is fully charged:

## Ni-MH Batteries (typical 700 mAh)

| Operation                  | Operating Time  |
|----------------------------|-----------------|
| While in use (TALK)        | 10 hrs approx.  |
| While not in use (Standby) | 120 hrs approx. |

#### Ni-Cd Batteries (typical 250 mAh)

| Operation                  | Operating Time |
|----------------------------|----------------|
| While in use (TALK)        | 4 hrs approx.  |
| While not in use (Standby) | 40 hrs approx. |

- Times indicated are for peak performance.
- The battery operating time may be shortened depending on usage conditions and ambient temperature.
- Clean the charge contacts of the handset and the base unit with a soft, dry cloth. Clean if the unit is subject to grease, dust or high humidity.
  - Otherwise the battery may not charge properly.
- The batteries cannot be overcharged unless they are repeatedly removed and replaced.
- For maximum battery life, it is recommended that the handset not

# be recharged until the battery icon flashes

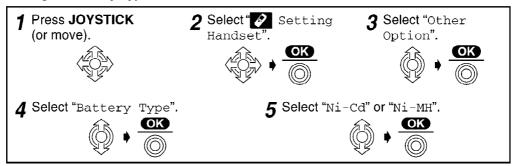

## 4.4. Replacing the Batteries

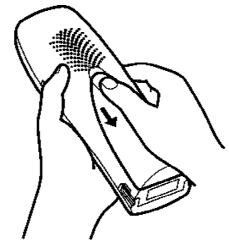

If the icon flashes after a few telephone calls even when the handset batteries have been fully charged, both batteries must be replaced.

- Charge new batteries for approximately 7 hours before initial use. (The telephone line cord must not be connected to the telephone socket at this time).
  - When replacing the batteries, ensure that the correct battery type is selected.
- When replacing the batteries, be sure to set up the battery type even if you install the same type of batteries to initialise battery remaining memory of your handset.

#### **Setting the Battery Type**

- The factory preset is "Ni-MH".
- To exit the operation, press any time.
- Do not use non-rechargeable batteries. If non-rechargeable batteries are fitted and start charging, it may cause the leakage of the battery electrolyte.
- Press the notch on the cover firmly and slide it as indicated by the arrow. Replace both batteries and close the cover then charge the handset for about 7 hours.

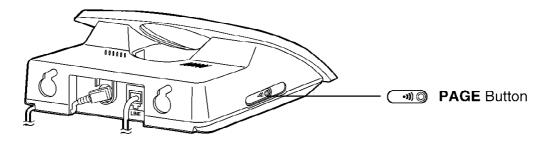

Please order Panasonic P03P(Ni-MH) or P03H(Ni-Cd) batteries. Note for Service:

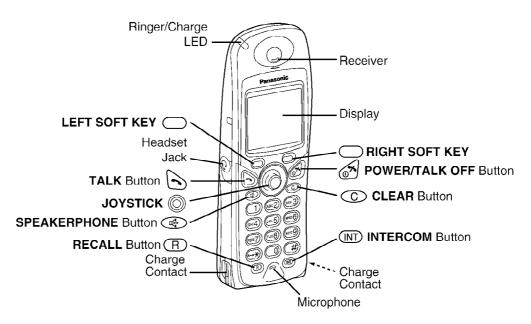

- When Ni-Cd batteles are fitted with the "Battery Type" setting in "Ni-MH", Licon might disappear and stop charging even if the handset is on the cradle for avoiding overcharge.

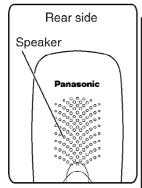

# 5. LOCATION OF CONTROLS

## 5.1. Base Unit

5.2. Handset

## How to Use the Handset Soft Keys

3 soft keys are used to select functions displayed directly above the keys. Functions displayed above the keys will change depending on the state of use. " ", " are displayed above the soft keys." To operate " (Phonebook), Example: Standby Mode Display press LEFT SOFT KEY. To operate " (Menu), press H/set 1 JOYSTICK directly as the middle soft →) 5 Calls ☑ 8 SMS key. To operate " (Redial), press RIGHT SOFT KEY. When "iii is displayed above a soft key, the soft key will not work.

• To select only " (Menu), you can also select it moving JOYSTICK up, down, left or right.

## Meanings of Icons above SOFT KEYS

| Icons     | Functions        | Icons            | Functions               |

|           | New Phonebook    | АБВ              | Russian                 |
| Q         | Search           | <b>V</b>         | Select                  |
|           | Key Lock         | Р                | Pause                   |
| 12/24     | 12/24 Hour Clock | 81               | Mute                    |
|           | No Function      | ×                | Delete                  |

## 6. SETTINGS

#### **Environment**

Do not use this unit near water. This unit should be kept away from heat sources such as radiators, cookers, etc. It should also not be placed in rooms where the temperature is less than 5°C or greater than 40°C. The AC adaptor is used as the main disconnect device. Ensure that the AC outlet is located/installed near the unit and is accessible.

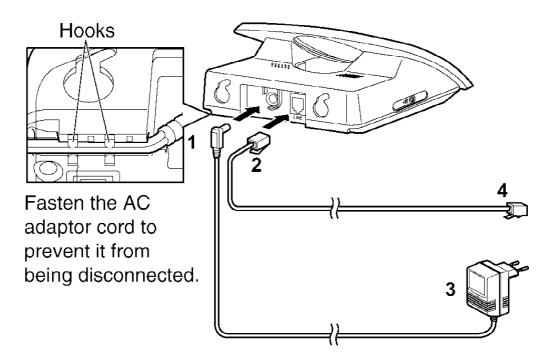

#### Location

- For maximum distance and noise-free operation, place your base unit:
- Away from electrical appliances such as TVs, radios, personal computers or other phone.
- In a convenient, high, and central location.

## 6.1. Connection

## 6.1.1. Base Unit

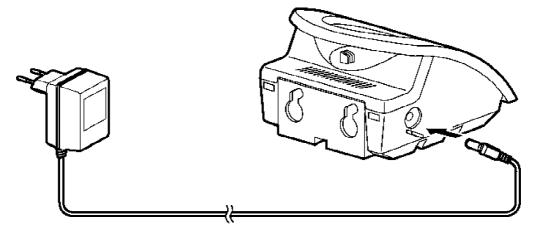

Plug in the AC adaptor and the telephone line cord in order 1, 2, 3, 4.

The AC adaptor must remain connected at all times (It is normal for the adaptor to feel warm during use).

- Never install telephone wiring during a lightning storm.
- USE ONLY WITH Panasonic AC ADAPTOR PQLV19CEZ.

## 6.1.2. Charger Unit

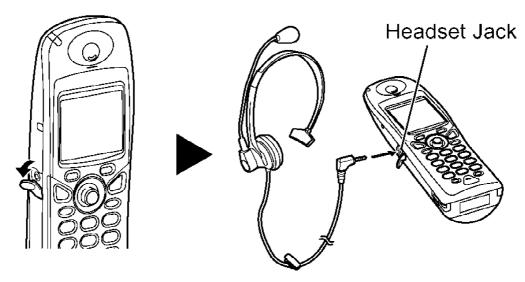

The AC adaptor must remain connected at all times (It is normal for the adaptor to feel warm during use).

## 6.1.3. Optional Headset

Plugging an optional headset into the handset allows hands-free phone conversations. Please use only the Panasonic KX-TCA89EX headset. While using the headset, speakerphone is not available. To switch to speakerphone, disconnect the headset.

## Connecting the optional headset to the handset

Open the headset jack cover, and connect the optional headset to the headset jack as shown.

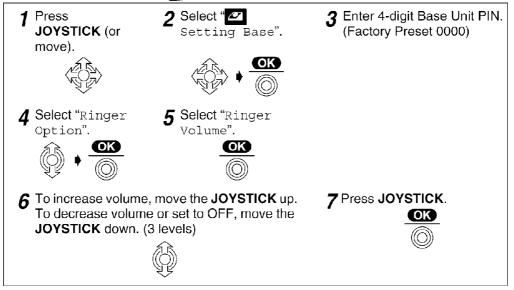

6.2. Symbols Used in This Service Manual

| Symbol       | Meaning  |  |  |
|--------------|--|--|--|
|              | Move JOYSTICK up, down, left or right. e.g., Search the main menu.   |  |  |
| e.g., OK     | e.g., Display of menu items  | Press JOYSTICK directly in the centre.                           |  |
| <u>OK</u>    | OK OK  | In this example, the desired item is selected.                   |  |
| e.g., Redial | e.g., Standby Mode Display   | Press RIGHT SOFT KEY.  |  |
|              |  | In this example, the telephone number last dialled is displayed. |  |
| e.g.,        | e.g., Display of menu items  | Press <b>LEFT SOFT KEY</b> .                                     |  |
| Go Back      |  | In this example, the display returns to the previous menu.       |  |
|              |  | © has the same function.   |  |
| <b>6</b> 7   | Press POWER/TALK OFF Button.  Press this button for one or two times, then the display returns to the standby mode any time. |  |  |
| •            | To go to the next step.  |  |  |
| ££ 39        | The words in " " indicate the words in the display.  |  |  |
| (« 🗐 »)      | Ringing Phone  |  |  |

# **6.3. Setting the Ringer Volume**

## **6.3.1. Base unit**

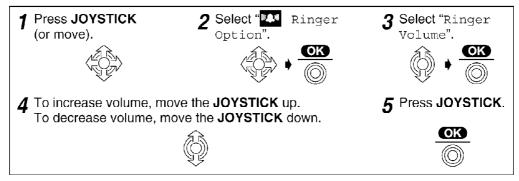

To exit the operation, press at any time.

• The factory preset is medium.

#### 6.3.2. Handset

The choices are 6 levels and off. If you set the volume to OFF, "\( \infty \)" is displayed, however, still the volume of a paging and intercom call are level 1.

• The factory preset is 6.

## 6.4. Settings Menu Chart

## 6.4.1. Base Unit

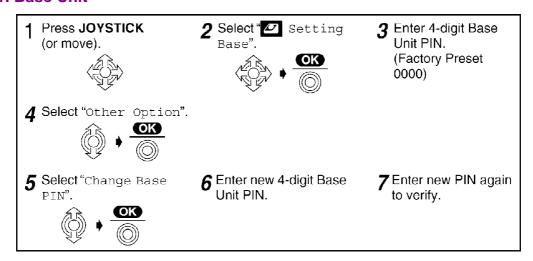

| 1st Menu     | 2nd Menu       | 3rd Menu        |
|--------------|----------------|-----------------|
| Setting Base | Ringer Option  | Ringer Volume   |
|              | Call Option    | Dial Mode       |
|              |                | Recall          |
|              |                | Pause Time      |
|              |                | Emergency Call  |
|              |                | Set ARS         |
|              |                | Call Restricted |
|              | Cancel Handset |                 |
|              | Other Option   | Change Base PIN |
|              |                | Reset Base      |

## 6.4.2. Handset

|                 |                  | reset namuset              |

## 6.5. PIN Code

## 6.5.1. Base Unit

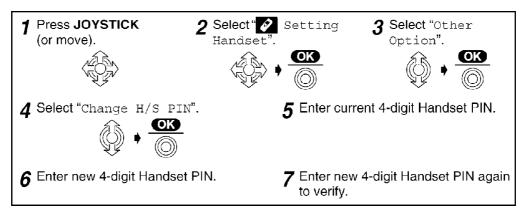

- To exit the operation, press

For Service Hint:

- \*: If the current 4-digit Base Unit PIN is forgotten, follow the procedures below.
- 1. If Base Unit and Handset are not linked with, first, follow the steps in Handset Registration to a Base Unit ().
- 2. Follow the steps above in <a href="Base Unit">Base Unit</a> () of PIN Code. At step 3, enter</a>
  <a href="Page 12">T</a>
  <a href="Page 12">O</a>
  <a

## 6.5.2. Handset

- To exit the operation, press any time.

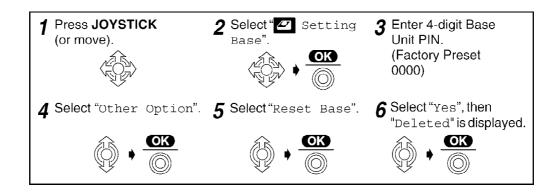

## For Service Hint:

This password is useful whether Base Unit and Handset are linked with or not.

## 6.6. Reset

#### 6.6.1. Base Unit

You can reset all of the base unit settings to their initial settings.

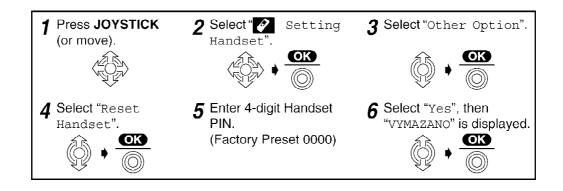

- To exit the operation, press any time.

**Base Unit Initial Settings** 

| Function                                     | Initial Setting       | Remarks (selectable                             |

# 6.7. Key Lock

You can lock the handset dialling buttons. Only incoming calls are accepted while the key lock is ON. When the key lock is ON, the menu icon the changes to when the key lock is ON, emergency calls cannot be made until key lock is cancelled.

#### Note for Service:

The key lock is cancelled if the handset is turned off.

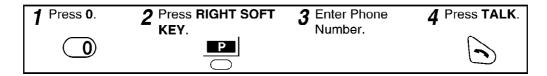

## 6.8. Recall Feature

**RECALL** (R) is used to access special telephone services. Contact your network provider for details. If your unit is connected to a PBX, pressing (R) allows you to access some features of your host PBX such as transferring an extension call.

## 6.9. Dialling Pause for PBX line/long distance service users

A dialling pause is used when a pause in the dialling of the phone number is necessary using a PBX or accessing a long distance service.

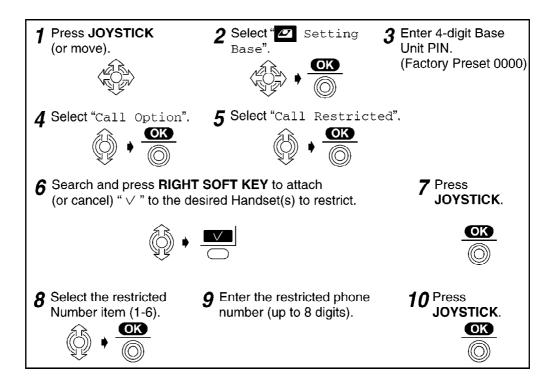

For example, when 0 (line access number) is dialled followed by a pause to access an outside line through a PBX:

- Entering a pause prevents misdialling when you redial or dial a stored number.
- Pressing RIGHT SOFT KEY more than once increases the length of the pause between numbers.

#### 6.10. Call Restriction

You can restrict selected handset(s) from dialling selected phone numbers. You can assign up to 6 call restriction numbers (up to 8 digits). If you dial a restricted number, the call does not connect and the restricted number flashes.

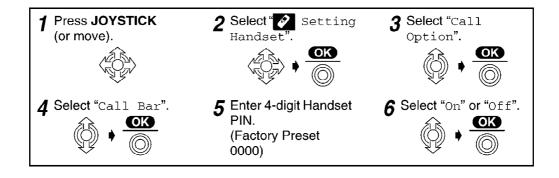

#### Note:

When you put a first digit on step 9, it must overwrite the current displayed numbers. We recommend you to write down the restricted phone number you entered.

- To exit the operation, press any time.

## 6.11. Call BAR On/Off (Call Prohibition On/Off)

When this feature is set to ON, outgoing calls cannot be made. Intercom calls and calls to numbers assigned as emergency numbers can be made.

- To exit the operation, press any time

- While the Call Bar mode is turned on, " is displayed.

## 6.12. Selecting the Display Language

You can select one of 19 languages. The factory preset is Czech.

To change the display language to Slovak, follow the steps below:

Press ♥ Move ♥ ↑ Press ♥ Move ♥ 4 times ↑ Press ♥ ↑

Move ♥ 2 times ↑ Press ♥ Select "slovensky" ↑ Press ♥ To exit the operation, press ♥ at any time.

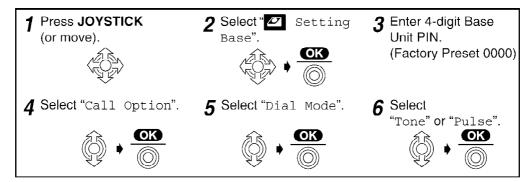

• If you set a language you cannot read, reset the handset to its initial settings.

#### **Note for Service:**

## 6.13. Selecting the Dialling Mode (Tone/Pulse)

You can change the dialling mode to tone or pulse depending upon your network service. If you have a touch tone service, select "Tone". If you have rotary or pulse service, select "Pulse"

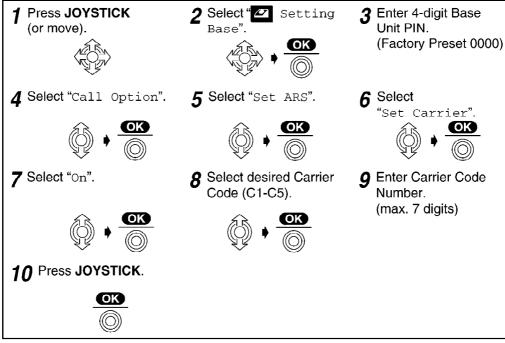

• The factory preset is "Tone".

## 6.14. Automatic Route Selection

Automatic Route Selection is a feature which selects the least expensive carrier (network) service available, when making long distance calls. When area code(s) have been related to carrier codes, you will need only dial the area code, the lower costing carrier (network) will automatically be dialled. Please contact your network provider regarding the carrier telephone charges.

## 6.14.1. Storing the Carrier Code(s)

Firstly you must subscribe to a second carrier (network) service. You can subscribe to a limit of 5 carrier services. Then store the code as follows:

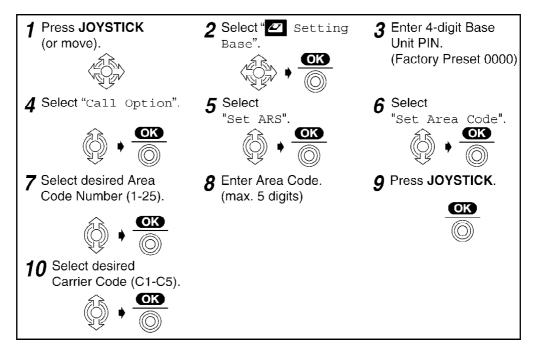

• To turn the feature off, select "Off" in step 7.

## 6.14.2. Storing the Area Code(s) and Relate the Carrier Code(s)

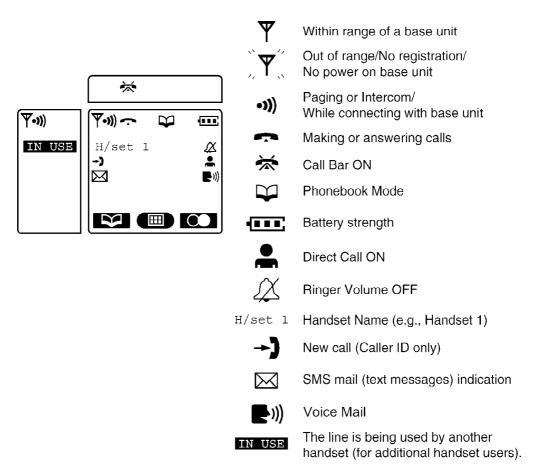

Store the area code(s) for which the chosen carrier (network) service charge rates are lower

than the original carrier (network) service. Up to 25 area codes can be stored. And you must relate the carrier code(s) that chosen lower costing.

## 7. DISPLAY

## 7.1. Display Icons

## 7.2. Main Menu Display

To go to the Main Menu, press the JOYSTICK odirectly in the centre (or move while in the standby mode display. The selected menu icon is turned over, and its title is displayed.

**Example:** "Caller ID" is selected.

Caller ID

Setting Base Unit

Walkie-Talkie

For Service Hint:

icon will be displayed if the unit took a signal from Telephone Company as a Voice Message signal.

In that case, press the right button of the Navigator key for a while.

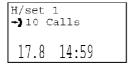

## 7.3. Caller ID Service

Caller ID is a service of your Telephone company and will only operate if you have subscribed to this service.

After subscribing to Caller ID, this phone will display the caller information.

If your unit is connected to a PBX or a telephone line that does not support this service, you will not be able to use it.

#### Standby Mode Display

When new calls have been received, the display shows the number of calls.

In the example on the left, 10 new calls have been received.

## 7.4. Before Requesting Help (Troubleshooting)

If you experience any problems with the normal use of your apparatus, you should unplug it from the telephone outlet and connect a known working telephone in its place. If the known working telephone still has problems, then please contact the customer service department of your Network provider. If it operates correctly, then the problem is likely to be a fault in your apparatus. In this case, contact your supplier for advice. Your Network provider may charge you if they attend a service call that is not due to apparatus supplied by them. Turn the power OFF then ON (Handset)/Disconnect then connect the AC adaptor (Base Unit).

| Problem  | Possible cause   | Solution   |
|--|--|--|
| The unit does not work.  | Batteries not installed properly.     AC adaptor of base unit not connected properly.  | Re-install batteries properly.     Disconnect and then connect     AC adaptor.   |
| Display is blank.  | Handset not turned on.   | Turn on power. (Refer to <b>Power ON/OFF</b> .)  |
| Display is blank even if the unit is charged.                        | Battery low.   | Recharge batteries more than about 15 minutes.   |
| Handset will not turn on.  | Batteries not inserted.      Batteries not charged.  | Insert the 2 rechargeable batteries supplied.     Place handset on base and connect AC adaptor to base and AC outlet (full charge period 7 hrs).   |
| Battery charge icon not counting up.                                 | Dirty charge contact.     Base not powered up.   | Clean charge/battery contact and retry charge.     Connect AC adaptor to base unit and AC outlet.  |
| ♥ icon flashes.  | Handset not registered to base. Handset out of range of base. No power into base unit.   | Register handset to base.*1 Move handset closer to base. Connect AC adaptor to base unit and AC outlet.  |
| Handset busy tone heard when  is pressed.                            | <ul><li> Handset out of range of base.</li><li> Another handset in use.</li></ul>  | Register handset to base.*2     Move handset closer to base.     Wait for the other user to complete call.   |
| No dial tone.  | Telephone line not connected.  | Insert telephone cord to network.     Turn power OFF then ON.     (Refer to Power ON/OFF.)   |
| Cannot dial out.   | Dialling mode setting may be incorrect.  Call Bar mode set.  Particular dialled number is restricted.  Key lock mode ON.   | Check whether the dialling mode setting is correct Turn feature off. (Refer to Call BAR ON/OFF.) Remove number from call restricted list. (Refer to Call Restriction.) Turn key lock OFF. (Refer to Key Lock.)   |
| Handset will not ring.   | Ringer switched off.   | Set ringer to one of 6 volume levels.  |
| Last number redial does not work.                                    | Number exceeded 24 digits.   | Redial manually.   |
| No Caller ID number displayed.                                       | Service not supplied.     Caller has withheld info.  | Caller ID service must be arranged with Network provider.  |
| • icon flashes.  | Battery low.   | Recharge batteries.  |
| Cannot register handset to base.                                     | Max. number of bases already registered to handset. Max. number of handsets already registered to base unit. Wrong PIN number entered (Default 0000).  Electrical noise in local area. | Delete unused base registrations from handset.     Delete unused handset registrations from base.     If PIN number is lost, contact the Panasonic Service Centre.     (Refer to PIN Code.)     Move base/handset away from sources of electrical noise (e.g., TVs, radios, etc.). |
| The unit begins ringing (one ring) after other connected telephones. | • The SMS feature is turned on.  | Turn the SMS feature off, if you do not use an SMS service.  |

## SMS-Text Messaging

| Problem                           | Possible cause  | Solution   |
|-----------------------------------|---|--|
| Cannot send a message.            | You have not subscribed to Caller ID.                 | Caller ID service must be arranged with Network provider.                                      |
|                                   | SMS Centre number is not stored<br>in your telephone. | Store the number.     (Refer to Changing the SMS Service Centre Numbers.)                      |
|                                   | Message was interrupted<br>during sending.            | Wait until the message has been sent<br>before using any other telephone<br>functions.         |
| Cannot send or receive a message. | Memory is full.                                       | Delete messages in the<br>Outgoing/Incoming lists. (Refer to<br>Reading/Displaying a message.) |

| Error Code | Description   |  |  |  |  |
|------------|---|--|--|--|--|
| FD         | Could not connect to the SMS Centre. Check that you have the correct SMS Centre numbers or turn the SMS feature on. |  |  |  |  |
| FE         | There was a problem sending the message.  |  |  |  |  |
| EO         | Your number is permanently withheld or you have not subscribed to a Caller ID service.                              |  |  |  |  |

#### Note:

\*1, \*2: It will take time for both Base Unit and Handset to be linked with.

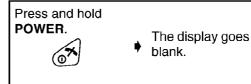

## 8. OPERATIONS

## 8.1. Power ON/OFF

#### **Power ON**

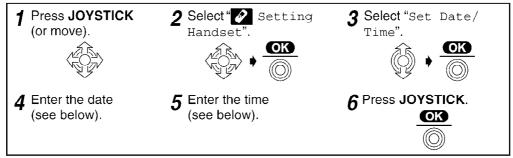

#### **Power OFF**

## 8.2. Setting the Date and Time

After a mains power failure, the clock needs to be adjusted. Ensure that the  $\overline{\Upsilon}$  icon is not flashing.

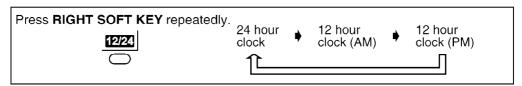

To exit the operation, press ( at any time.

Example: To set 16 February, 2003, 7:15 pm.

| Date |                |           |   | Time                      |   |           |                  |          |   |               |
|------|----------------|-----------|---|---------------------------|---|-----------|------------------|----------|---|---------------|
| Day  | Day Month Year |           |   | Hour Minute 12/24 hour cl |   |           | 12/24 hour clock |          |   |               |
| 1 6  | •              | ① (ABC 2) | * | 0 per 3                   | • | 0 PORS 7) | •                | 1) (KL5) | • | 12/24 12/24 C |

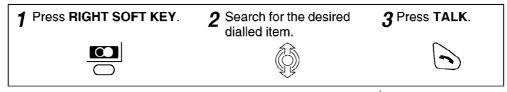

#### To select 12/24 hour clock

## 8.3. Redialling

The last 10 numbers dialled are automatically stored in the redial list.

#### **Dialling with the Redial List**

- If there are no items stored in the redial list when pressing , the display shows "Memory Empty".
- If the items are scrolled at the end when you search for the desired dialled item, an end tone sounds.
- You can also press to make a call.

## **Dialling the Last Number Dialled**

#### **Auto Redial**

If you press then to redial and the dialled number is engaged, the unit will automatically call back every 40 seconds, up to 12 times. When using Auto Redial, press again after pressing if the mute has not been cancelled.

## 8.4. Phonebook

You can store up to 200 caller information in the phonebook. If you subscribed to Caller ID and you received a call from the same phone number you stored with name in the phonebook, the display will show the caller's name.

#### **Private Category Feature**

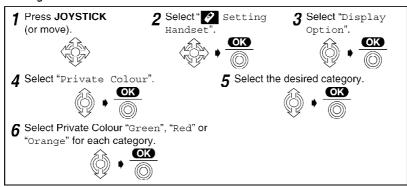

You can categorise caller information in the phonebook. There are 9 categories available. For example, category 1 can be used to save all friends numbers. For each category, you can rewrite the category names (max. 10 digits), you can select one of 3 Ringer LED colours and one of 15 ringer types. This feature is only available after subscription to Caller ID Service. Please contact your network provider for further information.

#### Example

| Private      |       | LED Colour | Private | Category    |           |  |
|--------------|-------|------------|---------|-------------|-----------|--|
| Category No. | Green | Orange     | Red     | Ringer Type | Name      |  |
| 1            |       | V          |         | 3           | Friends   |  |
| 3            |       |            | V       | 2           | Customers |  |

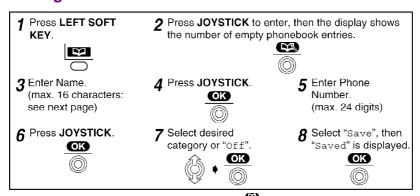

<sup>\*</sup> The factory preset LED colour is green.

#### Setting the Private Colour

- The factory preset is "Green".
- When you select the private colour on step 6, the Ringer LED will flash at the selected colour.

#### 8.4.1. Storing Caller Information

- If "Memory Full" is displayed when you press , the phonebook is full. To store, delete other stored items in the phonebook.
- To continue storing other caller information, repeat from step 3.

<sup>•</sup> The unit will indicate an incoming call using the factory preset LED colour (green) and the ringer pattern assigned to external calls momentarily until Caller ID information is received from the network provider.

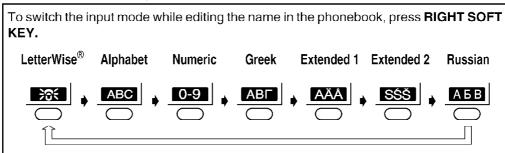

# - To exit the operation, press any time

## 8.4.2. Entering Names/Characters

| Keys             | Operations  |
|------------------|---|
|                  | Move the <b>JOYSTICK</b> up, down, left or right to move the cursor (a flashing digit).   |
|                  | Press to enter letters/numbers. (Items are added to the left of the cursor. If the cursor is at the beginning of a line, the item is added at the beginning.) |
| ©                | Press to delete characters. (Character on the cursor is deleted. To delete all characters, press and hold.)   |
| (A+a- <b>X</b> ) | Press to change between upper and lower case.   |
| 0                | Press to insert a blank space (except when in Numeric input mode).  |
| 1                | Press to insert a symbol (*, #, /, etc.) (except when in Numeric input mode).   |

#### Selecting the Input Mode

You can select one of 7 input modes by pressing **RIGHT SOFT KEY** while entering a name. The function icon above the key displays the current input mode. The factory preset is "**LetterWise**®". **LetterWise**® is a simplified text entry system. This system suggests to the user the most likely letter to follow the text entered previously. For the full character map, see **Phonebook Character Table**.

• If LetterWise® is selected, select a language you require.

#### **Example (Alphabet Mode)**

Enter the name using the letters on the keypad. For example, to enter "Anne" in Alphabet Mode:

The following small (or capital) letters of Greek, Russian (Cyrillic), Polish, Czech and Slovakian are not available. Then same letter as capital (or small) will be displayed. a ć č e ł l ľ n Ø r Ş ś š ť Ú ŵ Y Ý ž ż ž

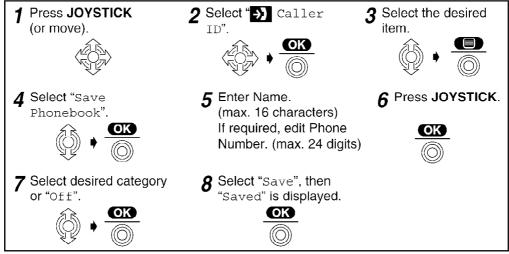

Press to change letter size; Capital > Small, Small > Capital.

To enter on LetterWise® Mode, see next page. (As for ), see the table on this page.)

## 8.4.4. Storing the Number in the Phonebook

#### From the Caller ID List Menu

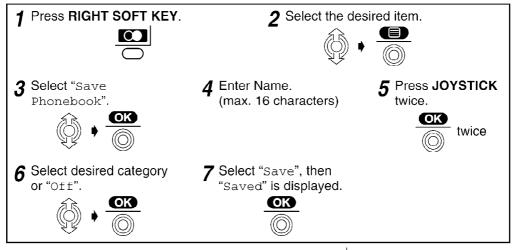

To exit the operation, press at any time.

- If the items are scrolled at the end when you search for the desired item, an end tone sounds
- If there is no item stored in the caller list when "Caller ID" is selected, the display shows "Memory Empty".

## From the Redial List Menu

To exit the operation, press at any time.

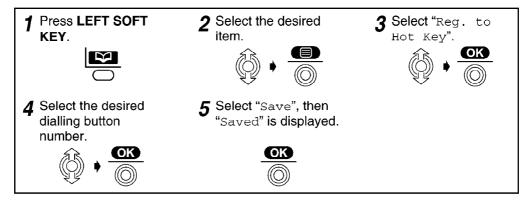

• If there is no item stored in the redial list when pressing , the display shows "Memory Empty".

## 8.4.5. Hot Key (: Speed Dial)

You can assign the dialling buttons 1 through as hot keys. You can choose 9 phone numbers from the phonebook.

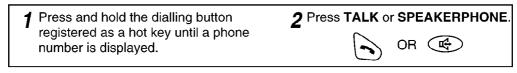

To exit the operation, press at any time.

## Registering a Phone Number as a Hot Key

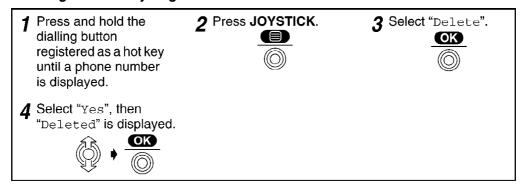

- If there is no item stored in the phonebook when searching for the desired item, the display shows "Memory Empty".
- If an item is already stored to a hot key, "\sqrt{"} will be displayed on the left of the key number. If a hot key number with "\sqrt{"} is selected, press "\frac{\omegas}{\omegas}" to select "Overwrite".

## Dialling with a Hot Key

## **Deleting the Hot Key Registration**

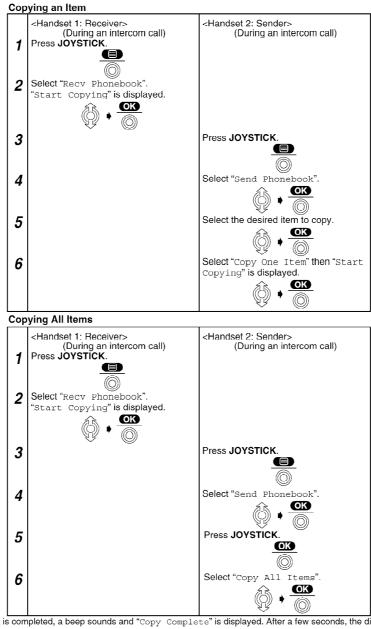

• Phonebook registration will not be erased when hot key registration is deleted.

## 8.4.6. Phonebook Copy

You can copy phonebook information between handsets registered to the same base unit. The phonebook copy must be performed while in intercom mode.

To exit the operation, press any tin

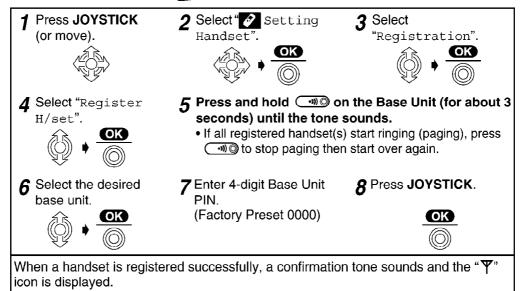

- When copying is completed, a beep sounds and "Copy Complete" is displayed. After a few seconds, the display will return to the intercom call. "Copy Incomplete" will be displayed if the receiver handset memory is full.
- If you move JOYSTICK up or down before pressing JOYSTICK on step 5, all items will not be copied. The items, from the item indicated now to the last item, are copied.

## 8.5. Handset Registration to a Base Unit

The handset supplied with the base unit is already registered. If an optional handset is purchased, it must be registered as follows.

Charge the optional handset batteries for 7 hours before initial use.

To exit the operation, press at any time.

- If you enter the incorrect Base Unit PIN, the error tone sounds and repeat from step 1.
- The handset main menu may change corresponding to the base unit registered to.

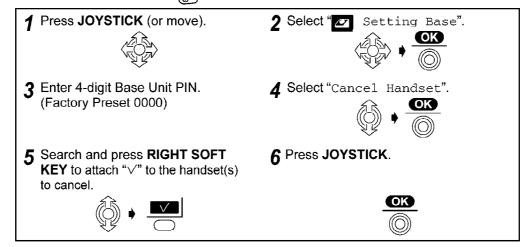

#### Note for Service:

At step 7, enter **X 7 0 0 0**. Finally Handset will be linked to Base Unit.

#### **Cancelling a Handset**

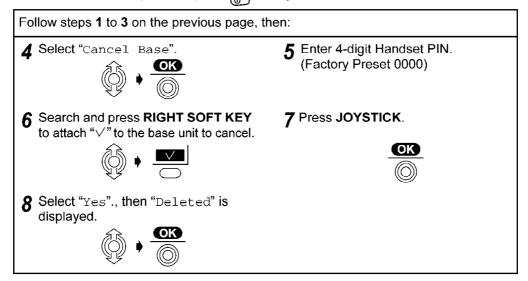

Each handset can cancel itself or another handset. This feature is usually used to cancel a link between Handset and Base Unit.

To exit the operation, press at any time.

#### Cancelling a Base Unit

If another handset is out of range and/or power is OFF when **Cancelling a Handset**, the previous base unit number will still remain in the base unit registered in the cancelled handset. Therefore, you need to cancel the base unit registered in the cancelled handset. To exit the operation, press at any time.

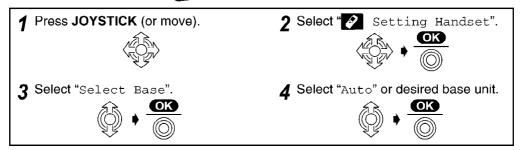

## 8.6. Base Unit Selection

When "Auto" (Automatic Base Unit Selection) is selected, the handset automatically searches for other registered base units if you move outside of the radio range of the current base unit.

When a specified base unit is selected, the handset will access that base unit only. Calls (both incoming and outgoing) can be conducted only via the selected base unit, even if the radio cells overlap with neighbouring base units.

To exit the operation, press at any time.

# 9. SMS Feature (Text Message)

You can send and receive text messages between other fixed and mobile phones that also support a compatible SMS feature and network.

The SMS feature is only available after subscribing to Caller ID.

#### Note for service:

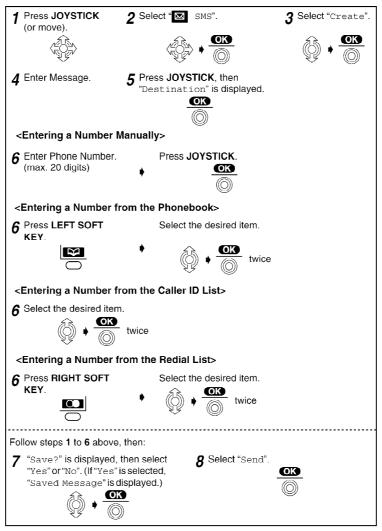

There are two types of SMS; one is Type1 and the other is Type2.

These types are different depending on the countries, and Type1 is assigned for this model. SMS is not available between a Type1 Handset and a Type2 Handset.

# 9.1. Writing and Sending a New Message to a Phone

You can write and send a new message. Each message can contain up to 612 characters.

To exit the operation, press at any time

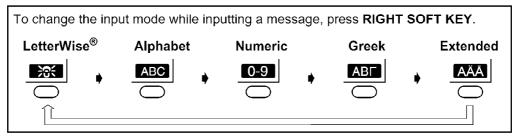

- "Sending Message is displayed after step 8. The display returns to the standby mode, then "Transferring Message" is displayed.
- If the base unit does not have sufficient memory to send a message, the display will show "SMS lists are memory full. Delete messages.". The unit will then return to the function menu.
- Once you have created a SMS message, the unit will display "Ause Last Text?" each time you select "Create".
   If you want to use the text of the last message sent once again, move the JOYSTICK up to recall the last message.
- If you try to send a message using a phone number (Destination) over 20 digits long from one of the Phonebook, Caller ID or Redial lists, "Invalid Number" is displayed and the display returns to "<Enter Phone No>".
- The maximum message length is 612 characters. Please consult your SMS service provider for further details.

## 9.2. Text Entry

| Keys             | Operations  |
|------------------|---|
|                  | Move the <b>JOYSTICK</b> up, down, left or right to move the cursor.  |
| ① to (WXYZ 9)    | Press to enter letters/numbers. (Items are added to the left of the cursor. If the cursor is at the beginning of a line, the item is added at the beginning.) |
| C                | Press to delete characters. (Character on the cursor is deleted. To delete all characters, press and hold.)   |
| (A-a- <b>X</b> ) | Press to switch between upper and lower case.   |
| 0                | Press to insert a blank space (except when in Numeric input mode).  |
| 1                | Press to insert symbol ( $*$ , $#$ , /, etc.) (except when in Numeric input mode).  |

#### Selecting the Input Mode

There are 5 text input modes: **LetterWise**<sup>®</sup> (default mode), Alphabet (ABC), Numeric (0-9), Greek (ABΓ) and Extended (AÄÅ). The function icon above the key displays the current input mode. For the full character map, see **SMS Character Table**.

• If LetterWise® is selected, select a language you require.

#### **Cross Reference:**

**SMS Character Table ()** 

# Entering Text in LetterWise® Mode

**LetterWise**® is the default input mode. **LetterWise**® is a simplified text entry system. This system suggests to the user the most likely letter to follow the text entered previously.

| Inserting Operations  |
|---|
| Enter letters by pressing @2 - @9.  |
| If the letter displayed is not correct, change the letter by pressing (#) (possibly several times).                     |
| Continue writing the word always checking that the letters displayed are correct and change them if necessary.          |
| To insert symbols, use ①. If the symbol you want does not appear, press # repeatedly until the required symbol appears. |

# Example (When the language choice is English.)

To enter "hello".

| 1 Press ← to change to the small letter.  | Enter Message> |
|---|----------------|
| <b>2</b> Press ••• "i" is the most frequent first letter of a word.                           | i              |
| <b>3</b> Press  to display the next candidate letter. "h" is the second most frequent letter. | h              |
| 4 Press 🖦 "e" is most frequent letter.  | he             |
| <b>5</b> Press 👀. "1" is most frequent letter.  | hel            |
| 6 Press 👀 "1" is most frequent letter.  | hell           |
| <b>7</b> Press 6. "○" is most frequent letter.  | hello          |

# 9.3. SMS Character Table

<sup>•</sup> The following small (or capital) letters are not available. The same letter as capital (or small) will be displayed. 
∅ §

# 9.4. Reading/Displaying a Message

## 9.4.1. In the Outgoing List

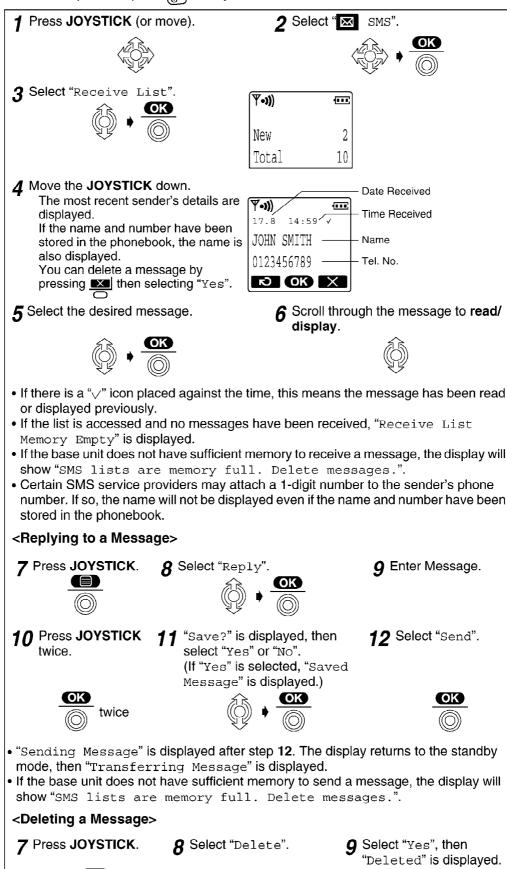

<sup>•</sup> Press ( to change letter size (Alphabet, Extended).

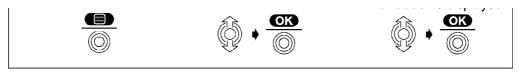

To exit the operation, press at any time. <Reading/Displaying messages> 1 Press JOYSTICK 2 Select "■ SMS". 3 Select "Send List". (or move). 6 Press JOYSTICK. 4 Select the desired 5 Scroll through the message. message to read/display. <Sending a message> 7 Select "Send". When you send to the same destination, press JOYSTICK then follow steps from 7 of Writing and Sending a New Message to a Phone. Press and hold C then go to step 9. Follow steps from 6 of Writing and Sending a New Message to a Phone. <Deleting a message> 7 Select "Delete". 8 Select "Yes", then "Deleted" is displayed. • You can also delete by pressing then selecting "Yes" on step 4. <Editing a message> **9** Press JOYSTICK. **7** Select "Edit Message". **8** Edit Message. 10 When you send to the same destination, press JOYSTICK then follow steps from 7 of Writing and Sending a New Message to a Phone. OR Press and hold C then go to step 11. 11 Follow steps from 6 of Writing and Sending a New Message to a Phone.

You can display messages saved in date/time order.

## 9.4.2. In the Incoming List

To exit the operation, press at any time.

# 9.5. Changing the SMS Service Centre Numbers

To send and receive SMS text messages, you need your SMS Message Centre telephone number.

Two numbers have been preset in your unit.

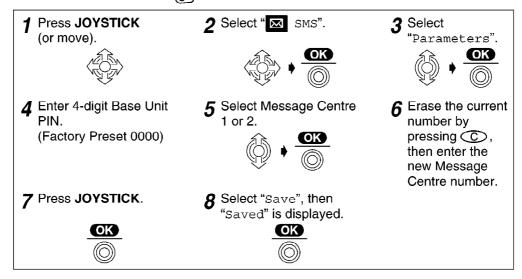

#### · For Czech

Fincom is your default SMS provider. The phone number for SMS Message Centre 1 is used to SEND text messages while the number for Message Centre 2 is used to RECEIVE text messages.

You can change the pre-set numbers if required.

SMS service is subject to the network service. Please contact your network provider.

To exit the operation, press at any time.

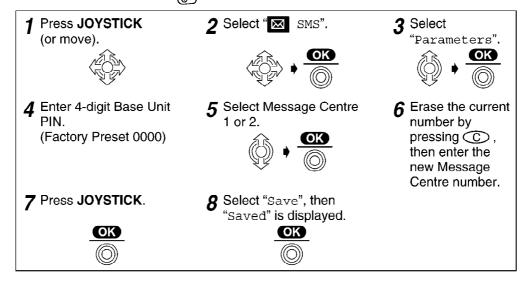

For your reference, these are the numbers that have been preset in your phone.

Message Centre 1 : 90098991 Message Centre 2 : 49850190 (Fincom SMS Network provider)

#### · For Slovakia

You need to change the pre-set numbers to your SMS Message Centre Number. Please contact your network provider.

To exit the operation, press at any time.

Please change the pre-set numbers to your SMS Message Centre Number. Please

contact your network provider.

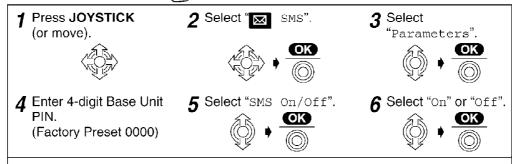

For your reference, these are the numbers that have been preset in your phone.

Message Centre 1: 90098991 Message Centre 2: 49850190

• If your phone is connected to a PBX, you need to add the PBX line access number (and a dialling pause) to the Message Centre 1 phone number.

#### 9.6. Turn the SMS Feature ON/OFF

To exit the operation, press at any time.

#### When the SMS feature is turned off;

- If you send a message, a tone sounds and the message will return to the SMS incoming list with "FD" attached.
- If you receive from SMS centre call, the message will not be received but SMS centre phone number will remain in the Caller ID list.
- If you turn the SMS feature on, the unit will begin ringing (one ring) after other connected telephones.
- The factory preset is "On".

# 9.7. Receiving a Text Message

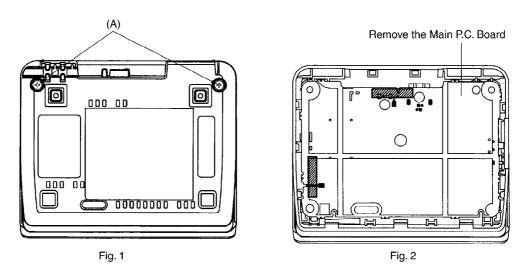

When a message has been received, the display will show the following and a tone sounds. The number of new message is displayed on the right of "\square\square".

• When the SMS message memory is full, "Full" is displayed. No messages can be received if the memory is full.

# 13. CHECK PROCEDURE (BASE UNIT)

# 13.1. Preparation

#### 13.1.1. Equipment Required

- DECT tester: Rohde & Schwarz, CMD 60 is recommended.
- Frequency counter: it must be precise to be able to measure 1Hz (precision; ±4ppm).

Hewlett Packard, 53131A is recommended.

- DC power: it must be able to output at least 1A current under 9V.
- Digital multi-meter (DMM): it must be able to measure voltage and current.
- Oscilloscope

#### 13.1.2. JIG and PC

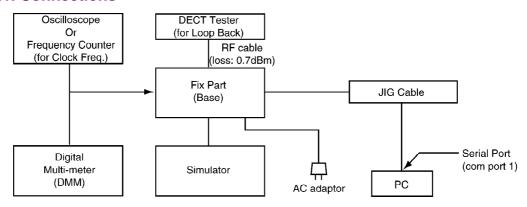

- EEPROM serial JIG
JIG Cable: PQZZ1CD505E

- PC which runs in DOS mode

- Batch file for setting: PQZZTCD505CX

## 13.2. PC Setting

#### 13.2.1. Connections

## 13.2.2. PC Setting

- 1. Open a window of MS-DOS mode from the start-up menu.
- 2. Change a directory.
- 3. Type "SET\_COM 1" from the keyboard (when COM port 1 is used for the connection).
- 4. Type "doskey".

#### Note:

See the table below for frequently used commands.

| Command name | Function                 | Example  |
|--------------|--------------------------|--|
| rdeeprom     | Read the data of EEPROM  | Type "rdeeprom 00 00 FF", and the data from address "00 00" to "FF" is read out. |
| readid       | Read ID (RFPI)           | Type "readid", and the registered ID is read out.                                |
| writeid      | Write ID (RFPI)          | Type "writeid 00 18 E0 0E 98", and the ID "0018 E0 0E 98" is written.            |
| setfreq      | adjust Frequency of RFIC | Type "setfreq nn".   |
| hookoff      | off-hook mode on Base    | Type "hookoff".  |
| hookon       | on-hook mode on Base     | Type "hookon".   |
| Getchk       | Read checksum            | Type "getchk".   |
| Wreeprom     | write eeprom             | Type "wreeprom 01 23 45". "01 23" is address and "45" is data to be written.     |

# 14. CHECK PROCEDURE (HANDSET)

## 14.1. Preparation

## 14.1.1. Equipment Required

- DECT tester: Rohde & Schwarz, CMD 60 is recommended.
- Frequency counter: it must be precise to be able to measure 1Hz (precision; ±4ppm).

Hewlett Packard, 53131A is recommended.

- DC power: it must be able to output at least 1A current under 2.4V for Handset, 9V for JIG.
- Digital multi-meter (DMM): it must be able to measure voltage and current.
- Oscilloscope

#### 14.1.2. JIG and PC

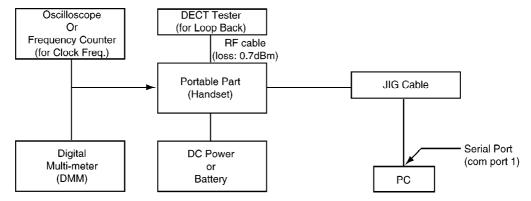

- EEPROM serial JIG

JIG Cable: PQZZ1CD505E

- PC which runs in DOS mode.
- Batch file for PC setting: PQZZTCD505CX

#### 14.2. PC Setting

14.2.1. Connections

#### 14.2.2. PC Setting

- 1. Open a window of MS-DOS mode from the start-up menu.
- 2. Change a directory.
- 3. Type "SET\_COM 1" from the keyboard (when COM port 1 is used for the connection).
- 4. Type "doskey".

#### Note:

See the table below for frequently used commands.

| Command name | Function                 | Example  |
|--------------|--------------------------|--|
| rdeeprom     | Read the data of EEPROM  | Type "rdeeprom 00 00 FF", and the data from address "00 00" to "FF" is read out. |
| readid       | Read ID (RFPI)           | Type "readid", and the registered ID is read out.                                |
| writeid      | Write ID (RFPI)          | Type "writeid 00 18 E0 0E 98", and the ID "0018 E0 0E 98" is written.            |
| setfreq      | adjust Frequency of RFIC | Type "setfreq nn".   |
| Getchk       | Read checksum            | Type "getchk".   |
| Wreeprom     | write eeprom             | Type "wreeprom 01 23 45". "01 23" is address and "45" is data to be written.     |

# 15. ADJUSTMENTS (BASE UNIT AND CHARGER UNIT)

If your unit have below symptoms, adjust or confirm each item using remedy column from the table.

| Symptom   | Remedy*                               |
|---|---------------------------------------|
| The base unit does not respond to a call from handset.  | Make adjustments in item (I)~(O)      |
| The base unit does not transmit or the transmit frequency is off.   | Make adjustments in item (I)~(L), (N) |
| The transmit frequency is off.  | Make adjustments in item (I)~(L), (N) |
| The transmit power output is low, and the operating distance between base unit and handset is less than normal. | Make confirmation in item             |
| The reception sensitivity of base unit is low with noise.   | Make confirmation in item             |
| The transmit level is high or low.  | Make confirmation in item             |
| The reception level is high or low.   | Make confirmation in item             |
| The unit does not link.   | Make adjustments in item              |
| The unit cannot charge.   | Make confirmation in item             |
| The unit cannot pulse dial.   | Make confirmation in item             |

<sup>\*:</sup> Refer to Adjustment (Base Unit) ()

# 15.1. Adjustment (Base Unit)

Please follow the items below when BBIC or EEPROM or FLASH ROM are replaced.

|          | Items                       | Adjustmen<br>Point | t Procedure*  | (  |

# **16. ADJUSTMENTS (HANDSET)**

If your unit have below symptoms, adjust or confirm each item using remedy column from the table.

| Symptom   | Remedy*                                |
|---|--|
| The movement of Battery Low indicator is wrong.   | Make adjustments in item (A)~          |
| The handset does not respond to a call from base unit.  | Make adjustments in item (A)~          |
| The handset does not transmit or the transmit frequency is off.   | Make adjustments in item (A)~ (M), (O) |
| The transmit frequency is off.  | Make adjustments in item (A)~ (M), (O) |
| The transmit power output is low, and the operating distance between base unit and handset is less than normal. | Make confirmation in item (J),         |
| The reception sensitivity of base unit is low with noise.   | Make confirmation in item (N)          |
| Does not link between base unit and handset.  | Make adjustments in item (A)~          |
| The Audio level is high or low.   | Make confirmation in item (R)          |
| The SP-Phone level is high or low.  | Make confirmation in item (S)          |
| The Headset level is high or low.   | Make confirmation in item (T)          |

# 21. BLOCK DIAGRAM (BASE UNIT)

# 22. CIRCUIT OPERATION (BASE UNIT)

#### 22.1. Outline

Base Unit consists of the following ICs as shown in **BLOCK DIAGRAM (BASE UNIT)** ().

- DECT BBIC (Base Band IC): IC2
- Handling all the audio, signal and data processing needed in a DECT base unit
- Controlling the DECT specific physical layer and radio section (B urst Module Controller section)
- ADPCM codec filter for speech encoding and speech decoding (DSP section)
- Echo-cancellation and Echo-suppression (DSP section)
- Any tones (tone, sidetone, ringing tone, etc.) generation (DSP section)
- DTMF receiver (DSP section)
- Clock Generation for RF Module
- ADC, DAC, timer, and power control circuitry
- All interfaces (ex: RF module, EEPROM, LED, Analog Front End, etc.)

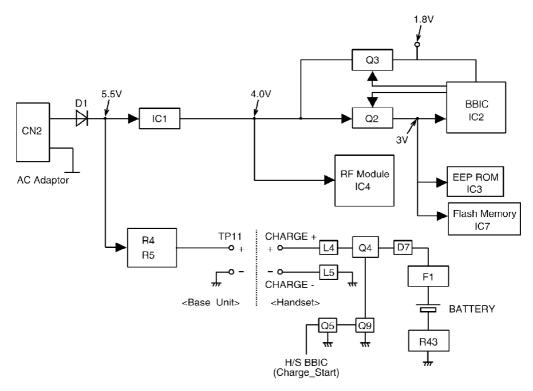

- RF Module: IC4
- PLL Oscillator
- Detector
- Compress/Expander
- First/Second Mixer
- Amplifier for transmission and reception
- FLASH MEMORY IC7
- Program D/L (DownLoad) Area
- EEPROM: IC3
- Temporary operating parameters (for RF, etc.)
  Refer to <u>EEPROM LAYOUT (BASE UNIT)</u> ().
- Additionally,
- Power Supply Circuit (+4.0V, +3V, +1.8V output)
- Crystal Circuit (10.368MHz)
- Charge Circuit
- Telephone Line Interface Circuit

## 22.2. Power Supply Circuit

The power is supplied to the DECT BBIC, RF Module, EEPROM, Relay Coil, LED and Charge Contact from AC Adaptor (+6V) as shown in Fig.101. The power supply is as follows;

- DECT BBIC (IC2): CN2(+6V) → D1 → IC1 → Q2 → IC2
- RF Module (IC4): CN2(+6V) → D1 → IC1 → IC4
- EEPROM (IC3): CN2(+6V) → D1 → IC1 → Q2 → IC3
- Flash Memory (IC7): CN2(+6V) → D1 → IC1 → Q2 → IC7
- Charge Contact (TP11): CN2(+6V) → D1 → R4, R5 → TP11

<Fig.101>

## 22.3. Telephone Line Interface

<Function>

- Bell signal detection
- Clip signal detection
- ON/OFF hook circuit
- Audio circuits

Bell & Clip (: Calling Line Identification Presentation: Caller ID) signal detection: In the standby mode, Q4 is open to cut the DC loop current and decrease the ring load. When ring voltage appears at the TP21 (A) and TP19 (B) leads (when the telephone rings), the signal is transferred as follows;

- B 
$$\rightarrow$$
 C12  $\rightarrow$  R16  $\rightarrow$  R32  $\rightarrow$  IC2 Pin 112 (CID IN -)

#### **ON/OFF** hook circuit:

In the standby mode, Q4 is open, and connected as to cut the DC loop current and to cut the voice signal. The unit is consequently in an on-hook condition.

When IC2 detects a ring signal or press the TALK Key onto the handset, Q5 turns on and then Q4 turns on, thus providing an off-hook condition (active DC current flow through the circuit) and the following signal flow is for the loop current.

- A 
$$\rightarrow$$
 D3  $\rightarrow$  Q4  $\rightarrow$  R34  $\rightarrow$  Q8  $\rightarrow$  R45  $\rightarrow$  R46  $\rightarrow$  D3  $\rightarrow$  B [OFF HOOK]

#### 22.4. Transmitter/Receiver

Base Unit and Handset mainly consist of RF Module and DECT BBIC.

Base Unit and Handset transmit/receive voice signal and data signal through the antenna on carrier frequency.

#### **Signal Pass:**

\*Refer to **SIGNAL ROUTE** ().

#### 22.4.1. Transmitter Block

The voice signal input from the TEL LINE interface goes to RF Module (IC4) through DECT BBIC (IC2) as shown in <u>BLOCK DIAGRAM (BASE UNIT)</u> ()

The voice signal passes through the analog part of IC2 where it is amplified and converted to a digital audio stream signal. The burst switch controller processes this stream performing encryption and scrambling, adding the various other fields to produce the GAP (Generic Access Profile) standard DECT frame, assigning to a time slot and channel etc.

In IC4, the carrier frequency is changing, and frequency modulated RF signal is generated and amplified, and radiated from antenna. Handset detects the voice signal or data signal in the circuit same as the following explanation of Receiver Block.

#### 22.4.2. Receiver Block

The signal of 19.2 MHz band (18.81792 MHz ~ 18.97344 MHz) which is input from antenna is input to IC4 as shown in BLOCK DIAGRAM (BASE UNIT) ().

In IC4, the signal of 19.2 MHz band is downconverted to 864 kHz signal and demoduleted, and goes to IC2 as GAP (Generic Access Profile) standard DECT frames. It passes through the decoding section burst switch controller where it separates out the frame information and performs de-encryption and de-scrambling as required. It then goes to the DSP section where it is turned back into analog audio. This is amplified by the analog front end, and goes to the TEL LINE Interface.

## 22.5. Pulse Dialing

During pulse dialing the hookswitch (Q4,Q5) is used to generate the pulses using the HOOK control signal, which is set high during pulses. To force the line impedance low during the "pause" intervals between dialpulses, the PULSE\_DIAL signal turns on Q9.

# 23. BLOCK DIAGRAM (HANDSET)

# 24. CIRCUIT OPERATION (HANDSET)

#### 24.1. Outline

Handset consists of the following ICs as shown in **BLOCK DIAGRAM (HANDSET)** ().

- DECT BBIC (Base Band IC): IC1
- All data signals (forming/analyzing ACK or CMD signal)
- All interfaces (ex: Key, Detector Circuit, Charge, DC/DC Converter, EEPROM, LCD)
- RF Module: IC3
- PLL Oscillator
- Detector
- Compress/Expander
- Amplifier for transmission and reception
- AMP: IC2
- Single OP\_AMP for SP
- MIDI (Musical Instrument Digital Interface): IC4
- 16-Tone 32-Poly PCM Sound Generator
- Port (LED direct driver with PWM)
- EEPROM: IC10
- Temporary operating parameters (for RF, etc.)

Refer to **EEPROM LAYOUT (HANDSET)** ().

## 24.2. Power Supply Circuit/Reset Circuit

#### **Circuit Operation:**

When power on the Handset, the voltage is as follows; BATTERY(2.2 V ~ 2.6V: J1)  $\rightarrow$  L1, D1, Q2 (1.8V)  $\rightarrow$  Q3 (2.7V)  $\rightarrow$  Q1 (4.0V) The Reset signal generates IC1 (78) and 1.8V.

## 24.3. Charge Circuit

#### **Circuit Operation:**

```
When charging the handset on the Base Unit, the charge current is as follows; DC+(5.5V ~ 6V) \rightarrow D1 \rightarrow R4, R5 \rightarrow CHARGE+(Base) \rightarrow CHARGE+(Handset) \rightarrow L4 \rightarrow Q4 \rightarrow D7 \rightarrow F1 \rightarrow BATTERY+ ... Battery ... BATTERY- \rightarrow R43 \rightarrow GND \rightarrow CHARGE-(Handset) \rightarrow CHARGE-(Base) \rightarrow GND \rightarrow DC-(GND) In this way, the BBIC on Handset detects the fact that the battery is charged.
```

The charge current is controlled by switching Q5 of Handset.

Refer to Fig.101 in Power Supply Circuit ().

## 24.4. Battery Low/Power Down Detector

#### **Circuit Operation:**

"Battery Low" and "Power Down" are detected by BBIC which check the voltage from battery. The detected voltage is as follows;

- Battery Low

Battery voltage: V(Batt) ≤ 2.3V ± 50mV

The BBIC detects this level and " starts flashing.

- Power Down

Battery voltage: V(Batt) ≤ 2.2V ± 50mV

The BBIC detects this level and power down.

Refer to Adjustment (Handset) ().

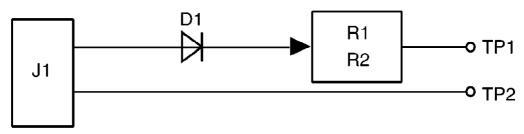

## 24.5. Speakerphone and Headset Jack

The hands-free loudspeaker at SP+ and SP- is used to generate the ring alarm. IC2 is used to switch off the telephone loudspeaker and is used to amplify the signal to drive the hands-free loudspeaker. They are selected using the SP\_AMP line from pin 70 of the BBIC. 2.5mm headset jack is also available.

# 25. CIRCUIT OPERATION (CHARGER UNIT)

## 25.1. Power Supply Circuit

The power supply is as shown.

**AC** Adaptor

## **26. SIGNAL ROUTE**

```

| Pin | Description | I/O | Connection | at Normal mode | at Rese |
|-----|-------------|-----|------------|----------------|---------|
| No  |             |     |            |                |         |
| 80  | VSS         | -   | -          | -              | -       |

#### Note:

JACK DETECTION; Detect if a Headset is inserted into the JACK or not. Without a Headset, 1.5V is measured at pin 23, while with a Headset, 0V is measured at pin 23.

# 29. EEPROM LAYOUT (BASE UNIT)

## 29.1. Scope

The purpose of this section is to describe the layout of the EEPROM (IC3) for the KX-TCD505 Base Unit.

The EEPROM contains hardware, software, and user specific parameters. Some parameters are set during production of the base e.g. crystal frequency adjustment at address 0286, some are set by the user configuration e.g. ringer volume at address 02C5, and some are set during normal use of the phone e.g. Caller ID data at address 096A..0FDB.

## 29.2. Introduction

The base unit uses a 32K bit serial EEPROM (IC3) for storing volatile parameters. All parameters are set up before the base leaves the factory. Some of these are vital for the operation of the hardware so a set of default parameters is programmed before the actual hardware fine-tuning can be initiated. This document lists all default settings with a short description. In the tables below values in a range that are similar are not repeated; i.e. Address 00 to 01 contains the value 00 simply means that the value 00 is repeated in all addresses in the range. All values in this document are in hexadecimal notation.

| Initial Type | Description                                   |
|--------------|---|
| F            | The data initialized by only F command        |
| 0            | The data initialized by F and 0 command       |
| 1            | The data initialized by F, 0 and 1 command    |
| 2            | The data initialized by all command (F,0,1,2) |

| Country<br>Setting | Description  |
|--------------------|--|
| х                  | Default - no specific country setting, so revert to default value. |

## 29.3. EEPROM Layout

## 29.3.1. General Setup1

# **30. EEPROM LAYOUT (HANDSET)**

# **30.1. Scope**

The purpose of this section is to describe "layout of the EEPROM (IC10) KX-TCA150 Handset". The EEPROM contains hardware, software, and user specific parameters. Some parameters are

set during production of the handset e.g. crystal oscillator adjustment at 0057, some are set by the user when configuring the handset e.g. ringer volume at 00A1, and some during normal use of the phone e.g. redial memory at 1EF6..1F77.

#### 30.2. Introduction

The handset uses a 64k bit serial EEPROM (IC10) for storing volatile parameters. All parameters are set up before the handset the factory. Some of these are vital for the operation of the hardware so a set of default parameters is programmed before the actual hardware fine-tuning can be initiated. This document lists all default settings with a short description.

This document lists all default parameters with a short description.

In the tables below values in a range that are similar are not repeated; i.e. Address 00 to 01 contains the value 00 simply means that the value 00 is repeated in all addresses in the range.

| Initial Type | Description                                   |
|--------------|---|
| F            | The data initialized by only F command        |
| 0            | The data initialized by F and 0 command       |
| 1            | The data initialized by F, 0 and 1 command    |
| 2            | The data initialized by all command (F,0,1,2) |

| Country<br>Setting | Description  |
|--------------------|--|
| x                  | Default - no specific country setting, so revert to default value. |

## 30.3. EEPROM contents

## 31. HOW TO REPLACE FLAT PACKAGE IC

## 31.1. Preparation

- PbF (: Pb free) Solder

- Soldering Iron

Tip Temperature of  $700^{\circ}F \pm 20^{\circ}F (370^{\circ}C \pm 10^{\circ}C)$ 

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

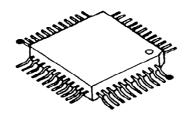

- Flux

Recommended Flux: Specific Gravity → 0.82. Type → RMA (lower residue, non-cleaning type)

Note: See ABOUT LEAD FREE SOLDER (PbF: Pb free) ().

#### 31.2. Procedure

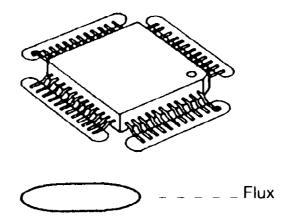

1. Tack the flat pack IC to the PCB by temporarily soldering two diagonally opposite pins in the correct positions on the PCB.

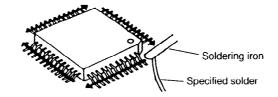

- - - - - - Temporary soldering point.

Be certain each pin is located over the correct pad on the PCB.

2. Apply flux to all of the pins on the IC.

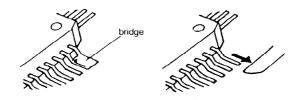

3. Being careful to not unsolder the tack points, slide the soldering iron along the tips of the pins while feeding enough solder to the tip so that it flows under the pins as they are heated.

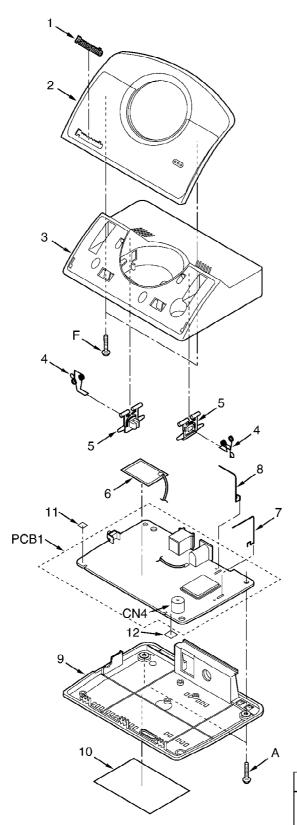

## 31.3. Modification Procedure of Bridge

- 1. Add a small amount of solder to the bridged pins.
- 2. With a hot iron, use a sweeping motion along the flat part of the pin to draw the solder from between the adjacent pads.

# **37. REPLACEMENT PARTS LIST**

## 1. RTL (Retention Time Limited)

#### Note:

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end

of this period, the assembly will no longer be available.

## 2. Important safety notice

Components identified by the <u>A</u> mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

- 3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.
- 4. ISO code (Example: ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

### **5. RESISTORS & CAPACITORS**

Unless otherwise specified; All resistors are in ohms (  $_{\Omega}$  ) K=1000  $_{\Omega}$  , M=1000k  $_{\Omega}$  All capacitors are in MICRO FARADS (  $_{\mu}$  F)P=  $_{\mu}$   $_{\mu}$  F \*Type & Wattage of Resistor

### 37.5. Fixtures and Tools

| Part No.     | Part Name & Description | Remarks |
|--------------|-------------------------|---------|
| PQZZ1CD505E  | JIG CABLE               |         |
| PQZZTCD505CX | BATCH FILE              |         |

#### Note:

See CHECK PROCEDURE (BASE UNIT) (), and CHECK PROCEDURE (HANDSET) ().

## 38. FOR SCHEMATIC DIAGRAM

# 38.1. Base Unit (SCHEMATIC DIAGRAM (BASE UNIT))

#### Notes:

1. DC voltage measurements are taken with voltmeter from the negative voltage line.

Important Safety Notice:

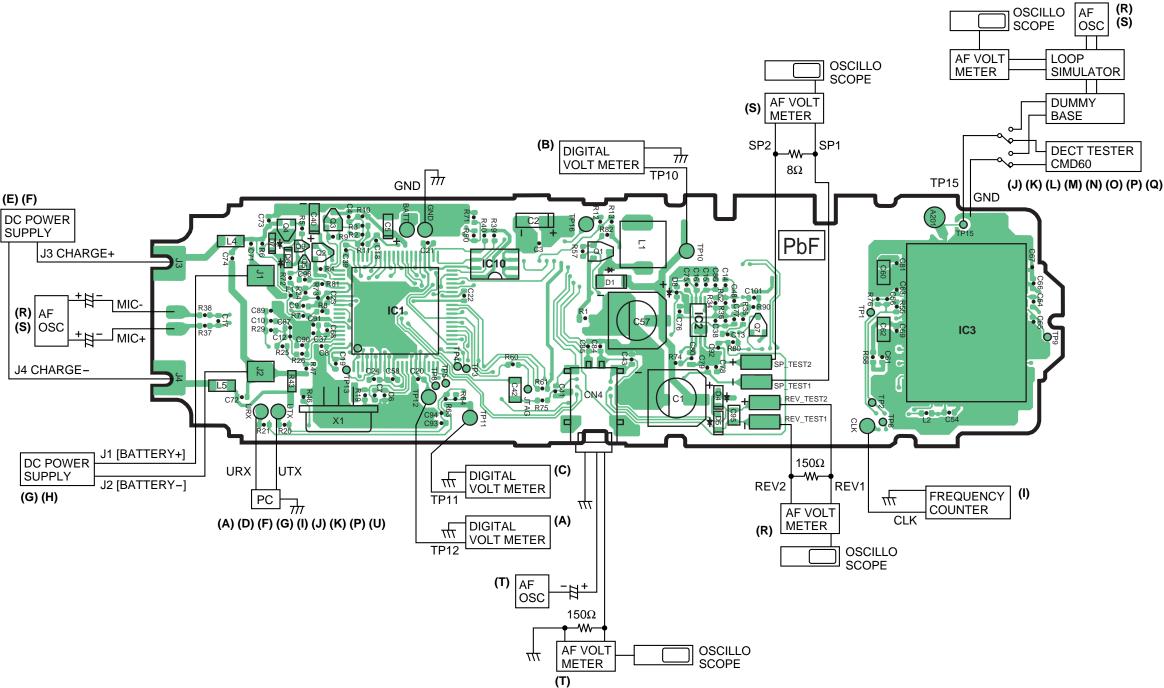

Components identified by  $\triangle$  mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

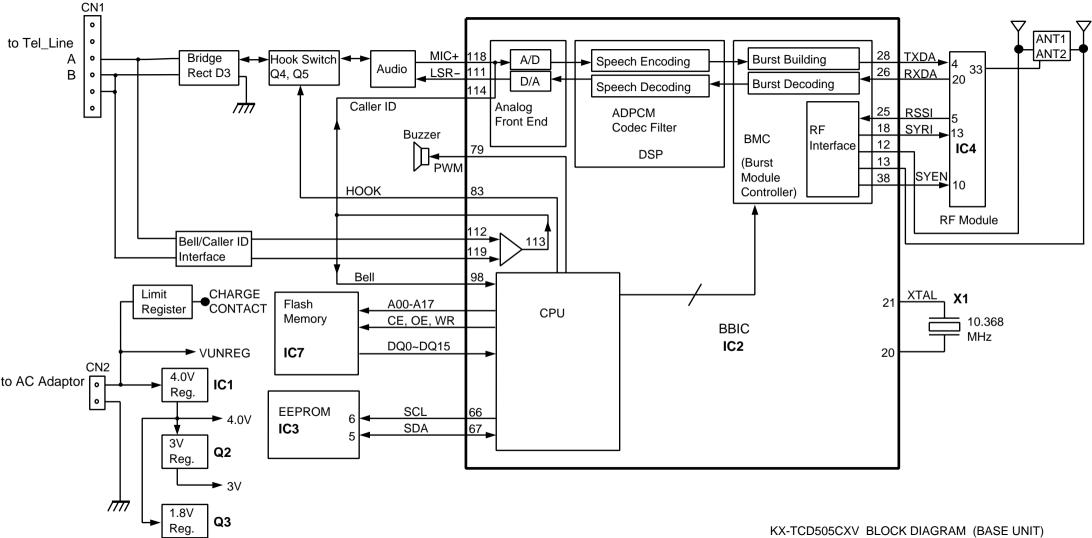

2. This schematic diagram may be modified at any time with the development of new technology.

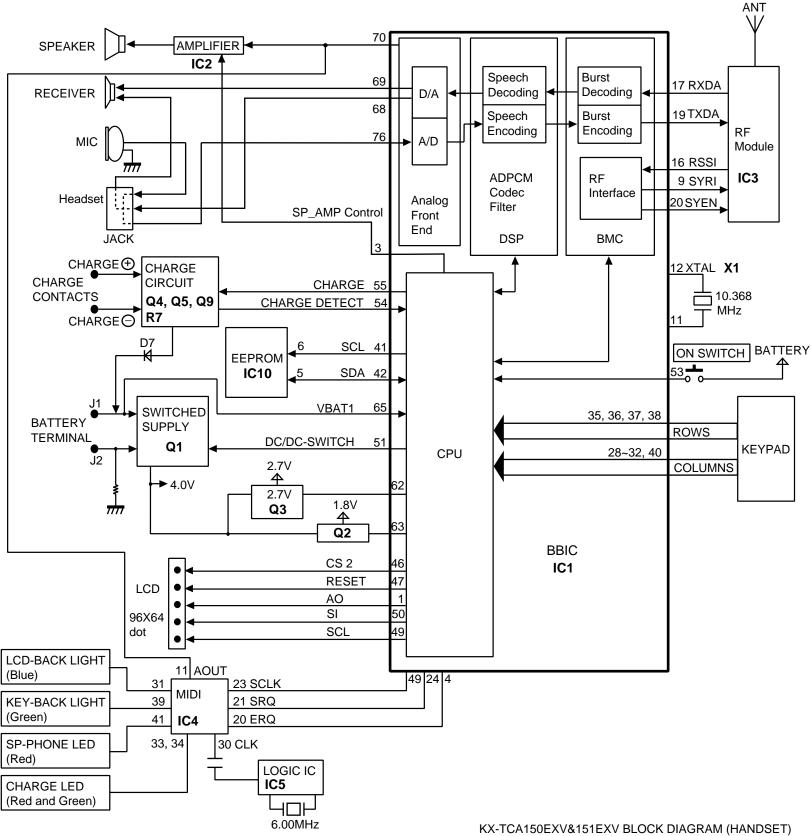

## 38.2. Handset (SCHEMATIC DIAGRAM (HANDSET))

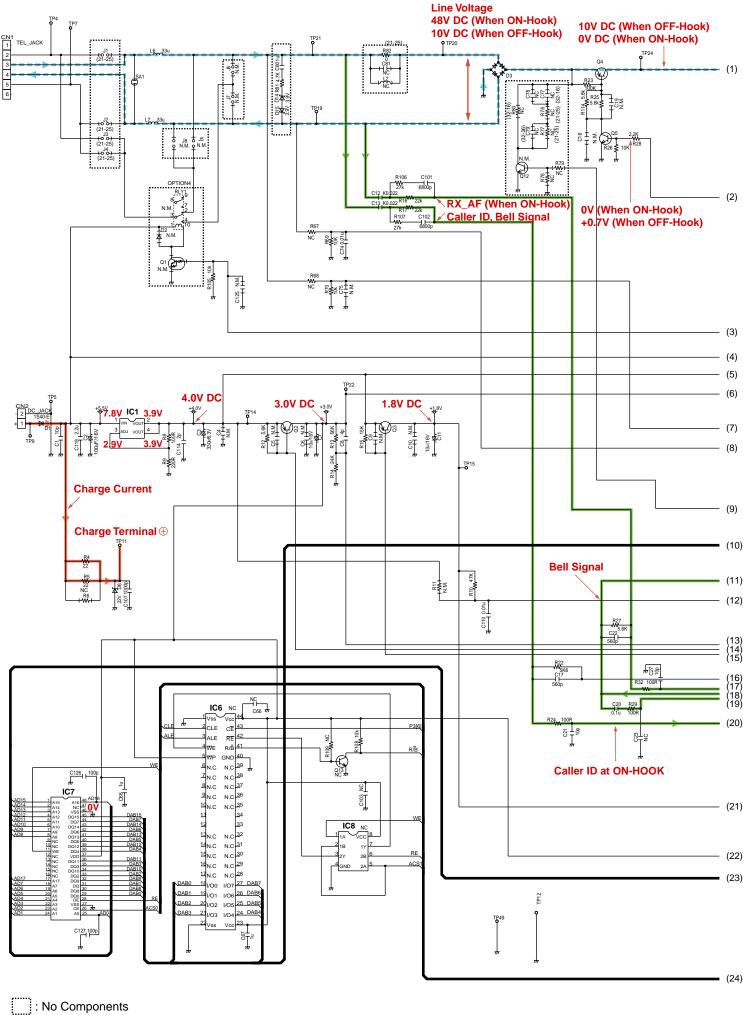

#### Notes:

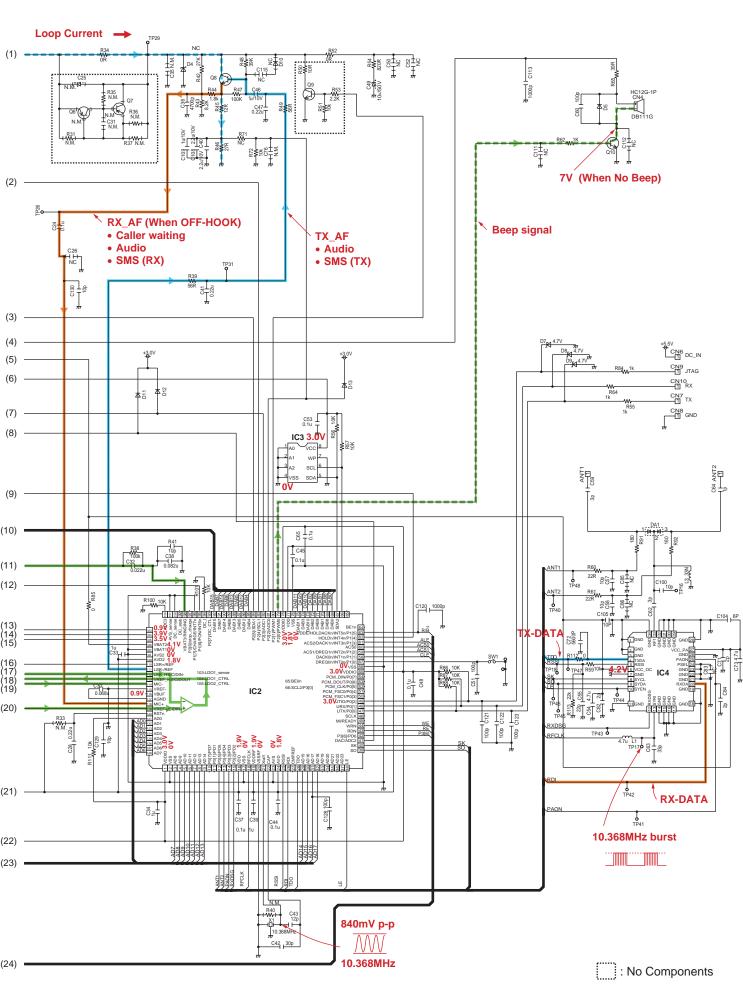

- 1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
- 2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.

Marked

CHG terminal is properly fit in the cabinet.

CHG terminal comes out of rib by pulling black lead wire when opening the cabinet and turning the PCB over. The terminal cannot have enough elastic force, cannot have good contact with handset, and it will result in charge problem.
